

The Open Source Automation Development Lab (OSADL) was founded over 20 years ago and is registered as a cooperative. We provide services a company needs when integrating Open Source software into its products, on behalf of our more than 100 cooperative members. Our members come from industries such as mechanical engineering, the automotive industry, control technology, plant engineering, and medical technology. The principle of reusability guides our work: OSADL offers services and projects that only need to be developed once but can then be used by all members.

To strengthen our team in Heidelberg, we are looking for

part-time support

**with various technical projects in the Linux environment,
approximately 8 hours per week.**

You'll be part of a small, highly motivated team where collaboration and mutual support are firmly rooted in our cooperative culture. At the same time, there's plenty of room to implement your own ideas, take on responsibility, and help shape your own role.

Your Profile

- Interest in technical topics and a passion for learning new things
- Basic experience working with Linux and the command line
- Basic programming and scripting skills
- Reliability

Contact

We look forward to receiving your application at **bewerbung@osadl.org**.
